

suppliers with SBTi approved climate protection targets.

Comment

To increase supplier emissions transparency, DT increased supplier requirements on supplier emission transparency in its new Supplier Code of Conduct. Suppliers also need to answer a questionnaire as part of the supplier qualification process (before the contract is signed), which also includes questions concerning CDP and CO2 emissions. DT is also directly contacting suppliers, not in the scope of our CDP Supply Chain request, by an own short questionnaire to provide scope 1, 2 and scope 3 up- and downstream emission transparency.

Type of engagement

Engagement & incentivization (changing supplier behavior)

Details of engagement

Climate change performance is featured in supplier awards scheme

% of suppliers by number

100

% total procurement spend (direct and indirect)

10

% of supplier-related Scope 3 emissions as reported in C6.5

10

Rationale for the coverage of your engagement

As part of tenders, we assign a maximum 20 percent weighting to sustainability performance as part of the supplier selection process. The 20% are divided in two categories, company specific criteria (including verified scope 1-3 CDP emission reporting, SBTi commitment and net zero targets for scope 1&2 and scope 3 and ecovadis score) and product specific criteria (depending on the product category, including e.g. product LCAs, energy efficiency and product circularity aspects)

In 2022, we refined specific sustainability criteria for the supplier selection: Particular importance is attached to the CO₂ footprint of our suppliers and their commitment to achieving ambitious climate targets; after all, the reduction of carbon emissions in our supply chain (Scope 3) plays a key role in achieving our goal of being climate-neutral by no later than 2040 along the entire value chain and to meet our new 2030 target to reduce combined scope 1-3 emissions by 55% against 2020.

Impact of engagement, including measures of success

20% sustainability impact in supplier award scheme, mainly based on emission transparency (scope 1, 2 & 3 upstream) with verified data, scope 1 & 2 and scope 3 net zero targets, science based targets and supplier emission intensity. The planned impact is an increased consideration of climate change within procurement decisions and by this the reduction of supply chain carbon emissions from purchases.

Measures of success are:

100% of tenders in competition and above 1 mio. € are awarded under consideration of 20% sustainability weight

Increasing number of number of contracts awarded based on the 20% sustainability weight

As we just started with a testing phase in 2022, the coverage regarding procurement spend and emissions in 2022 is still, but will due to the roll out significantly increase in 2023 and further increase within the next years.

Comment

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement & Details of engagement

Education/information sharing

Run an engagement campaign to educate customers about the climate change impacts of (using) your products, goods, and/or services

% of customers by number

100

% of customer - related Scope 3 emissions as reported in C6.5

100

Please explain the rationale for selecting this group of customers and scope of engagement

All our 270.8 mio. fixed-line and mobile customers are addressed by our sustainable products and services,

Our telecommunication infrastructure is fully operated by 100% electricity from renewables. We also offer all customers to recycle their devices .

All fixed line customers in Germany can decide to use routers and media receiver in the rental model (supporting longer product life times and optimized recycling). DT in Germany also offers labelled products with the "Blauer Engel" (Blue Angel) or "TÜV Green certified Product" to all customers and actively communicates these labels to its customers. In 2019 DT presented the new own sustainability label "we care" (now "Green Magenta".) One example is the offer of refurbished smart phones or the usage of refurbished fixed line devices. Furthermore, we provide services to recycle mobile and fixed line devices.

Another product with the new "Green Magenta" label are the new routers "Speedport Smart 4 and Speedport Smart 4 Plus. The housing of these routers consists of 90% recycled plastics and the packaging is totally free from plastics. Fixed line broadband customers are able to reduce commuting via working from home.

DT also offers private cloud services for its mobile customers. Mobile customers are also able to access sustainable carbon reduction services as car sharing, ride sharing or accommodation sharing via their smart phones.

Within its new transformation program "Green Magenta" increased offers for our customers to act more sustainable are part of our corporate strategy.

Business customers can e.g. access broadband cloud services, reducing ICT infrastructure related emissions or to use web- and videoconferences to reduce business travel and related emissions.

We are also utilizing future-oriented and widely available technologies to make cities viable for the future and to develop solutions for social challenges. For this, we are relying on innovative NarrowBand IoT (NB-IoT) technology, with which we are paving the way for the Internet of Things. NB-IoT devices have a large operating range and long battery service lives. Consequently, this technology provides the basis for many innovative uses that are cost- and energy efficient. Particularly useful areas of application for NB-IoT are, for instance, smart parking, smart cities, smart meters, as well as transport and logistics solutions.

Impact of engagement, including measures of success

Measures of success are:

1. Every customer has access to at least one sustainable product or service
2. Increasing the share from sustainable products and services (which was 42% in 2022) and
3. Increasing the DT enablement factor (emissions reductions by DT products and services/DT scope 1-3 emissions). The factor was 3.8 for Germany and 2.6 for Europe (incl. Germany) in 2022
4. Full device circularity by 2030
5. Number of sustainable products with "green" and or "good magenta" label (currently 44)

With respect to our customers our method of engagement is to increase the revenues from sustainable products and services. Therefore, we established our "Sustainable Products and Services Portfolio" in 2014. We prioritized our engagement based on the sustainability benefits, the competitive position of DT and the potential sales volume.

Relevant contributors to DT Enablement Potential 2022 for Germany have been broadband telecommuting 5.9 mio. t CO₂e, video conferencing 4.5 mio. t CO₂e, business conferencing 2.9 mio. t CO₂e, cloud computing 1.2 mio. t CO₂e, dematerialization 1.0 mio. t CO₂e, e-commerce 0.6 mio. t CO₂e, car sharing 0.6 mio. t CO₂e.

For 10 of our sustainable Services we developed detailed sustainability information on process level to promote the sales of these Services. For some products we also developed Excel tools to calculate the specific sustainability benefits for specific customers and also provided trainings for the sales teams.

To date, there is no industry-wide established system that provides customers with sustainability information about ICT products and services.

We have started to create just such a system using our product analyses – that is, to find out which sustainability contributions our products can make at all. Future plans also include keeping our customers better informed of these sustainability benefits, thereby sharpening our competitive edge.

C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization's purchasing process?

Yes, climate-related requirements are included in our supplier contracts

C12.2a

(C12.2a) Provide details of the climate-related requirements that suppliers have to meet as part of your organization's purchasing process and the compliance mechanisms in place.

Climate-related requirement

Complying with regulatory requirements

Description of this climate related requirement

DTAG recognizes its social responsibility to protect the environment. DTAG expect the Supplier to share DTAG's commitment by responding to challenges posed by climate change and working toward protecting the environment. Therefore DT outlined different requirements in its updated supplier code of conduct, including

- Comply with all applicable environmental laws and regulations,
- Agree to conform to all contractual requirements regarding product and packaging labelling, material content, recycling, and disposal.
- Prevent or eliminate waste of all types, including water
- Disclose complete, consistent, accurate and verified by 3rd party scope 1, 2 and 3 greenhouse gas (GHG) emissions data and/or components required to calculate GHG emissions data, via the Carbon Disclosure Program (CDP) or an alternative method that DTAG will provide.
- If requested by DTAG, suppliers must provide plans to reduce greenhouse gas (GHG) emissions in alignment with DTAG's requirements.

- Minimize negative impacts on biodiversity and deforestation, climate change and water scarcity.

% suppliers by procurement spend that have to comply with this climate-related requirement

C12.3

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Yes, our membership of/engagement with trade associations could influence policy, law, or regulation that may impact the climate

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

Yes

Attach commitment or position statement(s)

 Our climate targets.pdf

Describe the process(es) your organization has in place to ensure that your external engagement activities are consistent with your climate commitments and/or climate transition plan

There is a close cooperation including regular meetings between regulatory affairs and group corporate responsibility. This close cooperation ensures that all positioning against politics, regulation and within industry associations is fully aligned to DTs sustainability approach & climate targets and strategy, including our support for the Paris Climate Agreement and the target to limit global warming to 1.5 degree.

C12.3b

(C12.3b) Provide details of the trade associations your organization is a member of, or engages with, which are likely to take a position on any policy, law or regulation that may impact the climate.

Trade association

Other, please specify

GeSI (Global Enabling Sustainability Initiative)

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

GeSI aims to fulfil four major objectives: 1) Raise awareness of ICTs and related technologies' role in addressing the causes and effects of climate change; 2) Showcase innovative initiatives being undertaken by the ICT sector in the interests of environmental sustainability, and promote the exchange of best practices between the public and private sectors; 3) Mobilize political will to better reflect the role of ICTs in the outcomes produced by the major conferences on climate change and sustainable development; 4) Encourage governments to include ICTs and related technologies as key elements of their national climate change policies, across all industry sectors. Bolstering collaboration on these main objectives, GeSI seeks to synergize the messages being expressed by actors in the ICT field; the message that ICTs can enable low-carbon economies, and that 21st century governments, regulators and businesses cannot afford to exclude ICTs from policy or business initiatives to green our global economy. GeSI communicates with policymakers and key stakeholders to explain the significant contribution that ICT can play in addressing climate change globally and facilitating low-carbon development. GeSI wants the contribution of ICT to be recognised and integrated in government policies to achieve sustainability goals – at national, regional, and global level. Our role is to inform policymakers about ICT and climate change, to drive the sustainability debate and participate in joint initiatives. Additionally, GeSI drives the implementation of TCFD and Science Based Targets within the ICT industry. In 2021 GeSI officially launched the "Digital with Purpose" movement to drive the industry more sustainable.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

29.126

Describe the aim of your organization's funding

With its funding of GeSI DT is supporting the "transformation to a smarter, more sustainable world with digital solutions at its core."

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

International Chamber of Commerce (ICC)

Is your organization's position on climate change policy consistent with theirs?

Mixed

Has your organization attempted to influence their position in the reporting year?

Yes, and they have changed their position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

ICC is the only accredited global business organization at the UN. With the "Green Economy Roadmap" ICC emphasises the responsibility of business and companies for a sustainable development according to the Rio Convention of the UN. ICC is especially supporting climate protection activities such as regularly attending COP side events. Due to the heterogeneity of ICC the position is not always as ambitious as the DT climate protection policy & targets.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

18.000

Describe the aim of your organization's funding

Participation in the development and influence of the development of global environmental and climate instruments for companies.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is not aligned

Trade association

Other, please specify
B.A.U.M e.V.

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Association of companies in Germany, committed to environmental oriented management and behaviour. The network is engaged in: (1) awareness raising on problems and chances of environmental protection and questions on sustainable development within companies, institutions, politics, and population in Germany, (2) the distribution and further development of an integrated system of preventative ecological oriented management, and (3) the introduction of methods and measurements on environmental management and sustainable development. B.A.U.M. also launched the "Wirtschaft pro Klima" initiative.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

5.000

Describe the aim of your organization's funding

Supporting the targets and activities of the organization.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

Other, please specify

Econsense

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Econsense is the forum for sustainable development within the German economy. Econsense is associated with the BDI (Bundesverband der Deutschen Industrie) but formally independent and based on voluntary membership.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

20.452

Describe the aim of your organization's funding

Further development and optimization of sustainability targets- and processes within big Germany companies.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Other, please specify

Global Compact Caring for Climate

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Launched by the UN Secretary-General Ban Ki-moon in 2007, "Caring for Climate" is the UN Global Compact and UN Environment Programme's initiative aimed at advancing the role of business in addressing climate change. It provides a framework for business leaders to advance practical solutions and help shape public policy as well as public attitudes. Chief executive officers who support the statement are prepared to set goals, develop and expand strategies and practices, and to publicly disclose emissions.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

16.300

Describe the aim of your organization's funding

Further development and optimization of sustainability targets- and processes within companies.

ETNO

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

ETNO is an industry association of fixed net telecommunication providers in Europe. ETNO is currently developing a sustainability strategy with strong focus on climate protection and the impacts of telecommunications on climate to address EU political organizations, as mainly the EU Commission. ETNO is involved in various EU policy consultations with respect to "Fit for 55", circular economy and EU taxonomy.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

127.187

Describe the aim of your organization's funding

Further development and optimization of sustainability targets- and processes within European fixed net telecommunication operators.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

Other, please specify

European Green Digital Coalition

Is your organization's position on climate change policy consistent with theirs?

Consistent

Has your organization attempted to influence their position in the reporting year?

Yes, we publicly promoted their current position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

The European Green Digital Coalition (EGDC) was formed by 26 CEOs of ICT companies (including Deutsche Telekom) who signed a Declaration to support the Green and Digital Transformation of the EU on Digital Day 2021. The Declaration builds on the EU Council conclusions of December 2020 on Digitalisation for the benefit of the environment and recognises the ICT sector as a key player in the fight against climate change. With the signature of the Declaration, the 26 CEOs formed the EGDC, committing on behalf of their companies to take action in the following areas:

(1) investing in the development and deployment of green digital solutions with significant energy and material efficiency that achieve a net positive impact in a wide range of sectors

(2) developing methods and tools to measure the net impact of green digital technologies on the environment and climate by joining forces with NGOs and relevant expert organisations

(3) co-creating, with representatives of others sectors, recommendations and guidelines for green digital transformation of these sectors that benefits environment, society and economy

Trade association

Federation of German Industries (BDI)

Is your organization's position on climate change policy consistent with theirs?

Mixed

Has your organization attempted to influence their position in the reporting year?

Yes, and they have changed their position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

In the last years the BDI position advanced with respect to the general support for climate regulations and the EU Green Deal. Due to the heterogeneity regarding industries, there are sometimes differences with respect to regulatory details, e.g. regarding timelines and exceptions. Despite the progress made, we are still not fully aligned with the BDI position with respect to speed and ambition level of climate change mitigation activities. We tried to influence their position with respect to climate change due to bilateral talks on various levels including our CEO.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

475.000

Describe the aim of your organization's funding

BDI is the most important and strongest trade organization in Germany.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Other, please specify

Bitkom

Is your organization's position on climate change policy consistent with theirs?

Mixed

Has your organization attempted to influence their position in the reporting year?

Yes, and they have changed their position

Describe how your organization's position is consistent with or differs from the trade association's position, and any actions taken to influence their position

Generally, Bitkom is supporting climate related positions, especially with respect to the enabling role of digital technologies and solutions, but as Bitkom is dominated by production companies, the interests, e.g. with respect to extension of product lifetimes are sometimes different from the interest of telecommunication service providers such as DT. We addressed the topics of product life time by reparability, modularity and circularity. Since June 2023 DT is represented within the Bitkom board.

Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)

377.000

Describe the aim of your organization's funding

Bitkom is the trade organization for the digital economy in Germany. Bitkom is supporting the enablement potential of digital solutions on national policy level.

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is not aligned
